Publio Blenilio Tavares Silva

Senior Full-Stack Engineer with 8+ years building cloud-native products end-to-end (web, mobile, APIs, and data platforms), including 4+ years at scale in product companies (100K+ DAU). Currently at Pebble House building 0→1 AI-powered custom software. Core stack: TypeScript, React, Node.js, Go, Python, PostgreSQL, AWS, Terraform, Docker, and CI/CD. Master's in Computer Science (Software Engineering — test and code quality) and Bachelor's in Software Engineering (Summa Cum Laude) from the Federal University of Ceará (UFC).

EXPERIENCE

Senior Full-Stack Engineer

Pebble House

Delaware, US (Remote) | Nov. 2026 - Current

- Joining Pebble House to work directly with the CTO building bespoke, **AI-powered** custom software products for businesses from scratch.
- Designing and building **0→1** full-stack applications across **React, Node.js/TypeScript, Python, PostgreSQL, and AWS**.
- Translating complex business workflows into production-grade APIs, custom data models, and intuitive user interfaces.
- Integrating **AI and LLM** capabilities into client products to accelerate delivery and automate business processes.

Full-Stack Developer

Cupom Verde

Belo Horizonte, MG, BR (Remote) | Apr. 2021 - Nov. 2026

- Engineered end-to-end product features across web, mobile, APIs, and data services, supporting **100K+ daily active users**, by building and operating cloud-native applications with **AWS (API Gateway, CloudFormation, CloudWatch, CodePipeline, DynamoDB, ECS, Glue, Lambda, RDS, SQS, S3), Node.js, TypeScript, Vue.js, and Flutter**.
- Accelerated release velocity and improved deployment reliability, measured by a **60% reduction in deployment time**, by automating infrastructure provisioning with **Terraform** and infrastructure-as-code workflows.
- Modernized legacy services and improved long-term maintainability, measured by a **40% reduction in technical debt**, by refactoring cross-stack modules using **Clean Architecture**, domain boundaries, and consistent engineering standards.
- Increased platform resiliency and API throughput, measured by **99.9% uptime** and a **50% reduction in API response time**, by profiling bottlenecks, optimizing backend request paths, and tuning **PostgreSQL** and DynamoDB access patterns.
- Elevated engineering execution quality across the team, measured by onboarding and mentoring **3+ junior developers**, by leading code reviews, enforcing architecture guidelines, and coaching delivery practices from design through production.
- Strengthened delivery confidence and production stability, measured by **95% test coverage** and a **70% reduction in bug reports**, by implementing CI/CD pipelines with automated **unit, integration, load, and E2E tests** (Jest, Cypress).
- Optimized a critical high-traffic API and stabilized database utilization, measured by response times reduced to **~150ms** from multi-second latency and elimination of sustained **100% CPU spikes**, by redesigning service logic and introducing asynchronous queue-based processing (SQS).
- Reduced cloud operating costs without sacrificing system reliability, measured by a **37.5% reduction in AWS spend**, by right-sizing infrastructure, optimizing managed service usage, and removing inefficient resource consumption patterns.
- Developed and maintained cross-platform desktop applications using **Go** and **Tauri + Rust**, integrating native capabilities with shared application services and APIs.

Full-Stack Developer

Nubo

Porto Alegre, RS, BR (Remote) | Sep. 2024 - Nov. 2025

- Delivered full-stack capabilities for data-intensive products, measured by more reliable and consistent pipeline execution, by building backend services in **Python** and integrating them with frontend-facing product requirements.
- Scaled cloud processing architecture for high-volume pipelines, measured by improved throughput and faster end-to-end processing, by implementing distributed services and resilient orchestration patterns on **AWS**.
- Improved delivery predictability for cross-functional initiatives, measured by consistent partner-ready release cadence, by translating product and operations needs into performant REST APIs, data models, and deployable cloud services.
- Established a robust end-to-end data platform, measured by more dependable and scalable monthly partner deliveries, by designing a medallion data lake architecture (**bronze/silver/gold**) and structuring transformations across ingestion, standardization, and serving layers.

Full-Stack Developer

Casa Magalhães

Quixadá, CE, BR | Oct. 2020 - Mar. 2021

- Built production-ready solutions in the company's innovation hub, measured by successful transition of internal initiatives into deployable products, by owning delivery from prototyping through full-stack implementation.
- Delivered cloud-backed applications for major national clients, measured by stable releases and reliable client-facing functionality, by developing full-stack systems with **AWS (API Gateway, CloudFormation, DynamoDB, ELB, Lambda, RDS, SQS, S3), Node.js, and Vue.js**.

- Improved maintainability of existing products, measured by safer and more predictable change cycles, by refactoring services and frontend modules with **Clean Code** and structured code review practices.
- Increased software quality before release, measured by stronger regression prevention during delivery, by institutionalizing **code reviews** and automated **unit, integration, and E2E testing** within the development workflow.

Full-Stack Developer (Internship)

Casa Magalhães

Quixadá, CE, BR | Mar. 2020 - Oct. 2020

- Developed internal full-stack applications that improved operational workflows, measured by broader adoption of digital internal processes, by building maintainable features with **Node.js** and **Vue.js**.
- Raised release confidence for internal web systems, measured by earlier defect detection before production rollout, by combining manual validation with automated **Cypress E2E tests** across backend and frontend user journeys.

Web Developer (Service Contracts)

Sistema Maior de Comunicação

Quixeramobim, CE, BR | Jan. 2017 - Feb. 2020

- Launched the company's new web and mobile presence, measured by improved digital reach and user engagement, by developing the website and app with **Vue.js** and **Ionic**.
- Expanded CMS capabilities and improved content delivery agility, measured by faster publishing and update workflows, by creating custom **WordPress** plugins/themes and maintaining production websites.

Web Developer (Internship)

RALC TI

Quixeramobim, CE, BR | Aug. 2016 - Dec. 2016

- Delivered foundational web application features, measured by successful fulfillment of client-requested functionality, by implementing backend and server-rendered modules with **PHP**.
- Improved application availability in development and hosting environments, measured by more stable runtime operations, by installing and configuring **Linux servers** for web workloads.

PROJECTS

- **uptime-monitor**: self-hosted uptime monitoring platform with a Go API/worker (REST, GraphQL, WebSockets) and React dashboard for HTTP availability, latency, and live status.
- **aromadr**: Dockerized, language-independent test-smell analyzer with a Rust AST service for inspecting test quality across repositories.
- **Hands-on Series**: practical repositories focused on full-stack engineering patterns, cloud services, and test automation across multiple technologies.
- **serverless-websocket**: serverless real-time messaging on AWS with the Serverless Framework, Lambda, API Gateway WebSockets, and DynamoDB.

SKILLS

Languages: TypeScript, JavaScript, Python, Go, Dart, Rust, Java, PHP, C

Frameworks & Libraries: Node.js, React, Vue.js, NestJS, Express.js, Flutter, Ionic, Tauri

Cloud & DevOps: AWS (API Gateway, Lambda, ECS, RDS, S3, DynamoDB, SQS, CloudFormation), GCP, Docker, Kubernetes, Terraform, CI/CD

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB

Architecture & Practices: Product Engineering, Clean Architecture, Microservices, Event-Driven Architecture, REST API Design, Database Query Optimization, Automated Testing (Unit/Integration/E2E), Agile/Scrum

EDUCATION

Master's Degree, Computer Science (Software Engineering — test and code quality)

Universidade Federal do Ceará

Jan. 2024 - Dec. 2025

Bachelor's Degree in Software Engineering

Universidade Federal do Ceará

Quixadá, CE, BR | 2017 - 2020

Summa Cum Laude - Graduated with highest honors

Technical Program in Information Technology

EEEP Dr. José Alves da Silveira

Quixeramobim, CE, BR | 2014 - 2016

LANGUAGES

Portuguese: Native | **English:** Professional working proficiency (B2)
